INNEHÅLL

1. *Nils Pipping*: EIN KRITERIUM FÜR DIE REELLEN ALGEBRAISCHEN ZAHLEN AUF EINE DIREKTE VERALLGEMEINERUNG DES EUKLIDISCHEN ALGORITHMUS GEGRÜNDET 1— 16
2. *Helge G. Backlund*: ON THE EASTERN PART OF THE ARCTIC BASALT PLATEAU 1— 53
3. *Karl F. Lindman*: ÜBER EINE DURCH EIN DREIDIMENSIONALES RESONATORENSYSTEM ERZEUGTE INTERFERENZ DER ELEKTROMAGNETISCHEN WELLEN ... 1— 29
4. *H. Hausen*: ON THE LITHOLOGY AND GEOLOGICAL STRUCTURE OF THE SIERRA DE UMANGO AREA, PROVINCE OF LA RIOJA, ARGENTINE REPUBLIC 1—139
5. *Bruno Saxén*: DIE LICHTEMISSION UNTER DER WIRKUNG MOLELEKTRISCHER KRÄFTE AN DER OBERFLÄCHE VON KRISTALLEN 1— 16
6. *Erik Hägglund, Nils Löfman, Eduard Färber*: ÜBER AZETYLCELLULOSE AUS HOLZZELLSTOFFEN 1— 24
7. *Nils Pipping*: ÜBER EINE VERALLGEMEINERUNG DES EUKLIDISCHEN ALGORITHMUS 1— 14

ACTA ACADEMIAE ABOENSIS
MATHEMATICA ET PHYSICA I: 1

EIN KRITERIUM FÜR DIE REELLEN
ALGEBRAISCHEN ZAHLEN

AUF EINE DIREKTE VERALLGEMEINERUNG
DES EUKLIDISCHEN ALGORITHMUS
GEGRÜNDET

VON

D:R NILS PIPPING

Z. ZT. LEKTOR DER MATHEMATIK AN DER AKADEMIE ÅBO

ÅBO AKADEMI
ÅBO 1921

ACTA ACADEMIAE ABOENSIS
MATHEMATICA ET PHYSICA 1:2

ON THE EASTERN PART OF THE
ARCTIC BASALT PLATEAU

BY

HELGE G. BACKLUND

PH. D., PROFESSOR OF GEOLOGY AND MINERALOGY, ACADEMY OF ÅBO

ÅBO AKADEMI
ÅBO 1921

CONTENTS

	PAGE
1. INTRODUCTION	5
2. GEOLOGICAL FEATURES OF THE PLATEAU	9
3. NEW EVIDENCES OF THE ARCTIC VOLCANIC ACTION	10
4. PETROGRAPHIC DESCRIPTION OF ROCKS AND ANALYSES	
A. BASALTS FROM THE FARTHEST EAST	
a. BENNET ISLAND	17
b. WILKITSKI ISLAND	25
B. BASALT FROM THE NEAREST EAST	36
5. MODE OF EXTRUSION OF THE EASTERN BASALTS	41
6. CONCLUSIONS	51

ACTA ACADEMIAE ABOENSIS
MATHEMATICA ET PHYSICA I:3

ÜBER EINE DURCH EIN DREIDIMENSIONA-
LES RESONATORENSYSTEM ERZEUGTE
INTERFERENZ DER ELEKTROMAGNE-
TISCHEN WELLEN

VON

D:R KARL F. LINDMAN
PROFESSOR DER PHYSIK AN DER AKADEMIE ÅBO

ÅBO AKADEMI
ÅBO 1921

INHALT:

I. EINLEITUNG	5
II. APPARATE	7
III. DURCHLÄSSIGKEITSVERSUCHE	10
IV. REFLEXIONSVERSUCHE	13
V. ZUSAMMENFASSUNG	26

ACTA ACADEMIAE ABOENSIS
MATHEMATICA ET PHYSICA I:4

ON THE
LITHOLOGY AND GEOLOGICAL STRUCTURE
OF THE
SIERRA DE UMANGO AREA,
PROVINCE OF LA RIOJA, ARGENTINE REPUBLIC.

A CONTRIBUTION TO THE KNOWLEDGE OF THE SUBANDEAN
BORDER OF THE STRUCTURAL ELEMENT OF THE
„SIERRAS PAMPEANAS“.

BY
H. HAUSEN, PH. D.

ÅBO AKADEMI
ÅBO 1921

CONTENTS.

	Page
<i>PHYSIOGRAPHY OF THE AREA</i>	1
<i>HISTORICAL REVIEW OF THE GEOLOGICAL EXPLORATION OF THE WESTERN PART OF THE PROVINCE LA RIOJA</i>	6

PART I.

<i>LITHOLOGY OF THE CRYSTALLINE, GRANITE INTRUDED BASEMENT.</i>	11
A) THE „PREGRANITIC“ SUPERCrustal ROCKS OF THE SIERRA DE UMANGO AREA	13
a) The sedimentary schists	13
b) The basic intrusive (and effusive?) rocks (metavolcanics).....	22
1) Concordant sills of amphibolites	23
2) Peridotitic rock (sill).....	28
3) Basic, kataclastic schists	29
B) THE FAMATINA GRANITE INTRUSION AND ITS EXOGENE PLUTONIC METAMORPHISM	30
a) Granite varieties of the Famatina	32
b) Zone of abyssal mingling, brecciation and assimilation on the western border of the Famatina batholith.....	35
c) Crosscutting pegmatitic dikes	40
d) Plutonic metamorphism in the Sierra de Umango schist-body	42
C) AN EARLY PALAEOZOIC REGIONAL METAMORPHISM, SUBSEQUENT TO THE FAMATINA GRANITE INTRUSION	45
a) Manner of intrusion of younger granites and syenites	46
b) Petrographical characteristics of the younger intrusives	49
D) KATACLASTIC STRUCTURES OF THE BASEMENT ROCKS PRODUCED PRINCIPALLY BY THE LATER (TERTIARY) OROGENETIC MOVEMENTS	50
a) The crushed, granulated granites	51
b) Deformations in the sedimentary schists	54
c) Kataclasis in some „dark schists“	55
E) GENERALITIES ON THE GEOLOGICAL POSITION OF THE SIERRA DE UMANGO AREA	56

PART II.

	Page
<i>„POSTGRANITIC“ CONTINENTAL DETRIITIC FORMATIONS. VOLCANIC ROCKS. TERTIARY TECTONICS. GEOMORPHOLOGY, MINERAL OCCURRENCES.</i>	63
A) THE BASIS OF SEDIMENTATION OF THE CONTINENTAL STRATA	65
B) THE CONTINENTAL SERIES.....	66
a) Description of localities	68
b) Summary of the stratigraphy	89
C) THE PERMIAN OROGENETIC PHASE	96
D) VOLCANIC ROCKS IN THE CONTINENTAL SERIES.....	97
a) Continental lava rocks	98
b) " tuff layers	102
E) CROSSCUTTING ERUPTIVE DIKES IN THE CRYSTALLINE BASEMENT	104
F) TERTIARY (?) VOLCANIC ROCKS	107
G) THE TERTIARY AND QUATERNARY GEOMORPHOLOGICAL DEVELOPMENT	109
a) A first tertiary orogenic phase	109
b) A levelling phase subsequent to the tertiary folding process. Formation of a mountain gravel conglomerate	113
c) The development of the main actual relief	116
d) The postpliocene erosion and accumulation.....	121
1) A first erosion phase	123
2) Sheet flood erosion	125
3) A later erosion phase. Linear cutting. River terraces.....	127
4) Differences of the detailed sculpture in the crystalline rock-ground and in the terranes of the continental sediments	130
H) MINERAL OCCURRENCES	132

LIST OF ILLUSTRATIONS.

PLATES.

I. Fig. 1. Mica-quartz schist.	Fig. 2. Sericitic schist.
II. Fig. 1. Famatina granite.	Fig. 2. Famatina granite, crushed.
III. Fig. 1. Amphibolite.	Fig. 2. Biotite in transformation to fibrolite.
IV. Fig. 1. Amphibolite schist. Amphibole partly transformed to biotite.	Fig. 2. Quartzite with hornfels structure (inclusion).
V. Fig. 1. Granite with dynamic flow structure.	Fig. 2. Aplite, completely granulated.
VI. Fig. 1. Porphyrokataclastic schist.	Fig. 2. Porphyrokataclastic schist.
VII. Fig. 1. Kataclastic schist.	Fig. 2. Kataclastic schist.

FIGURES.¹

	Page
1. Key map comprising the middle part of the South American continent and showing the position of the Sierra de Umango area.....	3
2. The Morro alto de Cordobés, Sierra de Umango ridge	7
3. Contorted limestone layers. NW from Carrizal	14
4. Peridotitic, serpentinized rock	28
5. Sketch map, comprising the central part of the Famatina batholith, showing the palaeozoic schist inclusions (after Bodenbender)	30
6. Great individuals of red potash feldspar. Pegmatite NE from Villa Union	41
7. Profile along the western side of the Cerro Guandacol, showing the Gondwana layers. Sketch from the nature.....	69
8. Profile through the lower Gondwana, Quebrada de los Lagares, Cerro Villa Union	73
9. Panorama view to the south of the eastern side of the Cerro Villa Union	74
10. The Gondwana strata in the Cerro Punta Colorada. Looking south	75
11. An erosion remnant of red Gondwana sandstone. Las Ramaditas	76
12. A part of the „intermontane sandstone zone“. Looking SE	79
13. Tertiary arenaceous strata. Northern part of the „intermontane zone“. Looking south	82
14. The tillite occurrence at Agua Blanquita	90
15. Lava and tuff accumulations of tertiary age. North from Tambillos	108
16. A part of the „intermontane zone“, showing bending of the strata. Looking NE	110
17. Tectonical profile (E-W) from the western side of the Sierra de Umango ridge showing twofold dislocations.....	111
18. Tectonical profile (E-W) from the same part showing an overthrust phenomenon	112
19. Overthrust folding at the Cerro La Pampa. Eastern border of the „intermontane zone“.....	112
20. Sunken remnant of a young tertiary conglomerate. Crest of the Sierra de Umango ridge. Looking south	114
21. Tectonical profile (E-W) from the eastern border of the „intermontane zone“ showing dislocation of quaternary gravels	124
22. High destructive diluvial terraces at the slope of the Nevado de Famatina, near Puerto Alegre.....	126
23. Eastern side of the Sierra de Umango ridge showing young erosion in sheet flood surfaces	128
24. Highland topography near the crest of the Sierra de Umango ridge. Looking east	131

¹ All the landscape views and profiles sketched by the author.
